

Storm Water Management Program

Summary

Stormwater Overview

What is stormwater?

Stormwater is water runoff after a rainstorm from streets, construction sites, parking lots, buildings, and other areas that goes directly into storm drains and eventually into local streams and rivers. This water can pick up pollutants along the way to these streams and rivers. Towson University has set up a program that seeks to protect this water from pollutants.

Why are stormwater and sewer systems separate?

Stormwater systems are not treated at the wastewater treatment facility. This water flows direct Tm0 g0 G(St)Pt-4(irec Tm0 g0 G(St)P
